IV 35 год

Whether you call them **forklift mast guide rollers**, forklift **roller bearings**, or **mast guide bearings**, these bearings are designed for heavy load carrying capacities and high intermittent shock loads, such as those in forklift applications.

The internal design of mast guide bearings and other varieties of track roller bearings maximizes load capacities to protect bearing components and applications from high radial and thrust loads. Tight seals and high grease-fills are used to ensure minimal wear and tear and the highest possible lifespan for the bearing components.
